

## Mode Mean and Median

Mode is the Most Common number in a group.

6, 3, 3, 5, 2, 6, 7, 1, 6, 5

There are three 6's so 6 is the mode or most common number.

Mean is another word for average. To find the mean add up the numbers and divide by the number of numbers.

20, 30, 10. The total is  $20+30+10=60$   
There are three numbers so we divide 60 by 3.  $60 \div 3 = 20$ .  
So the mean or average is 20.

Median is the middle number in a group.

8, 6, 2, 4, 3. Put them in order: 2, 3, 4, 6, 8.  
Then find the middle: 2) 3) 4 (6) (8)  
The Median is 4.
