

## Perimeter:

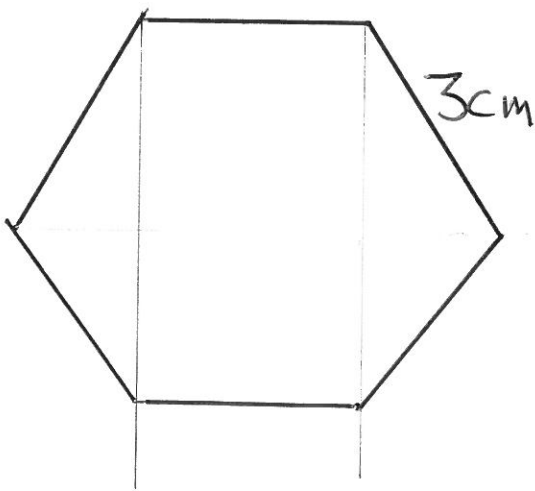

This is how far we have to travel around the edge of a shape.

$$7 + 7 + 3 + 3 = 20 \text{ cm.}$$

Often we have to work out one side.

If it is a rectangle or square or regular shape this is easy.

So, for this hexagon each side is 3cm. So we can say  $6 \times 3 \text{ cm} = 18 \text{ cm}$   
Perimeter is 18cm
